SAS Graphics Consulting

Question: Are you a SAS customer who has a certain graph or map in mind, but you don't have the SAS programming skills to create it?

Answer: Hire me to write the code for you!

About Me:

I'm Robert Allison, and SAS graphics is my thing. I worked at SAS for 30 years, and am now retired. You might know me from my "Graph Guy" blog, conference papers (SUGI, SGF, SESUG), graph book, or graph examples website. I consider myself one of the best in the world, when it comes to creating custom graphs and maps with SAS.

Consulting Details:

I can create pretty much any custom SAS graph or map in a very short amount of time. A custom SAS graph that might take a savvy SAS programmer 1 week, I could probably create in 1 day. I also know tricks I can use to create custom graphs, that other SAS programmers don't even know are possible.

I will provide you with a stand-alone SAS job that creates your desired custom graph or map, much like the examples on my robslink.com website. The code will use SAS/Graph (Procs gplot, gchart, gmap), or the newer ODS Graphics (Procs sgplot, sgmap) based on your preferences, and the type of custom graph you want. Your SAS programmers can then further test, enhance, and integrate the graph into your system.

You must be an existing SAS customer, and provide a way for me to remotely use your SAS software, on your hardware.

Contact:

I would be happy to hear from you!
